PROFESSIONAL SUMMARY

Backend Software Developer with 2 years of experience in API development, web features, and third-party integrations, along with a solid foundation in backend architecture. Exploring AI Engineering, with exposure to LLM APIs and RAG-based systems.

TECHNICAL SKILLS

JavaScript, Node.js, Express.js, Next.js, PHP, Laravel, React.js, Redux, Tailwind CSS, MongoDB, MySQL, PostgreSQL, Redis, Vector Database, RAG, LLM, Embeddings, GraphQL, Socket.io, JWT, OAuth, RBAC, Firebase, AWS, Docker, CI/CD, Git, Postman, Jest, Playwright, OOP's, SOLID

PROFESSIONAL EXPERIENCE

Associate Software Engineer — Webkul Software Pvt. Ltd.

Jan 2026 – Present

- Developed and maintained **Node.js** backend services for mobile applications, building **APIs** and business-specific features in collaboration with front-end teams.
- Reduced mobile app API response times by **70%** by architecting scalable **REST/GraphQL APIs** optimized via **Redis caching**, **PostgreSQL query tuning**, and background **cron jobs** to ensure a seamless, low-latency user experience.

Junior Software Engineer — Rudra Innovative Software

Jul 2025 – Dec 2025

- Developed backend **APIs (Node.js)** primarily for the AlerTrax mobile application, and built **React.js** components for the web admin dashboard to display live tracking data.
- Built backend modules for **Stripe**-based pricing plans and subscription management for connected tracking devices.

Web Developer — BrainGrid Technology Pvt. Ltd.

Jul 2024 – Jul 2025

- Built full-stack features using **React.js** for the front-end and **Laravel** for backend **APIs**, with **Redux/Redux Toolkit** for state management, delivering a responsive single-page application, including a real-time team chat and collaboration interface handled through **Socket.IO**.
- Integrated **Firebase** notifications for real-time alerts and activity updates.

PERSONAL PROJECTS

AI Document Q&A Platform

- Built a full-stack SPA (**React.js**, **Redux**, **MERN stack**) enabling users to upload documents and ask natural-language questions instead of manually searching them, with **Firebase/JWT** authentication and **Zod** for request validation.
- Implemented a **RAG pipeline** — chunking documents into **embeddings**, storing them in a **vector database**, and retrieving relevant sections to generate context-aware answers via an **LLM**.

Distributed Job Processing & Monitoring Platform

- Built a **Node.js/Express** backend using **Kafka** as a message queue to process background tasks (e.g., emails, report generation) asynchronously, with retry handling for failed jobs.
- Used **Redis** for **caching** and duplicate-task prevention, and **Docker** to containerize the app for a consistent, portable environment.

Freelance Lead Hunter

- Built a **React.js/Redux** automation dashboard that collects freelance project leads via **Apify** and displays client requirements, budget, and status in a single view, with a source adapter pattern for easy expansion.
- Integrated an **LLM** layer to draft proposals for review and analyze historical outcomes, surfacing trend-based insights on which sources/skills correlate with higher acceptance rates.
- Built a **Recharts + MongoDB** analytics view to track lead volume and proposal acceptance rates — actively used to manage my own freelance search.

EDUCATION

B.Tech in Information Technology, Dr. A.P.J. Abdul Kalam Technical University

August 2019 – Jul 2023

CGPA: 7.5 | Major Subjects: Computer Networks, Data Structures & Algorithms, Operating Systems, C, C++, Java
